

PeriFlame

Industrial Combustion Technologies and Solutions

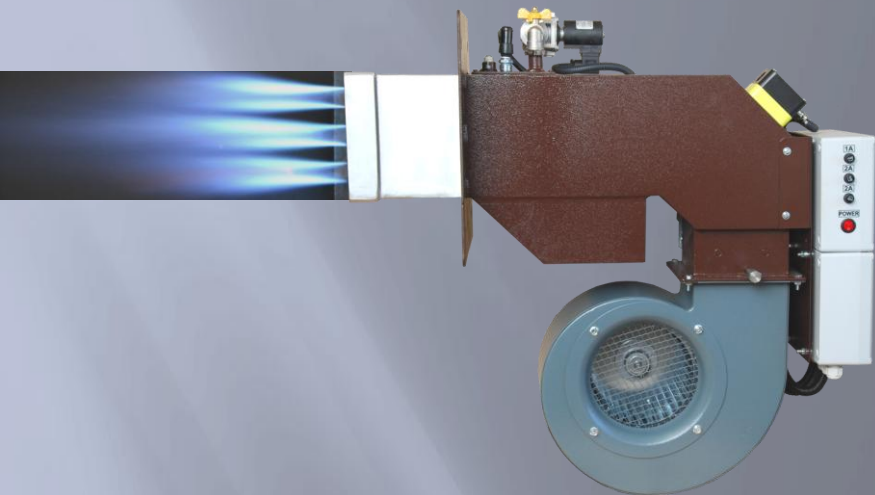

**NOVEL COMBUSTION TECHNOLOGY -
UNIQUE EQUIPMENT & SOLUTIONS**

**From INDUSTRIAL BURNERS and HEAT
GENERATORS to GAS TURBINE COMBUSTORS
and THERMAL PROPULSIONS**

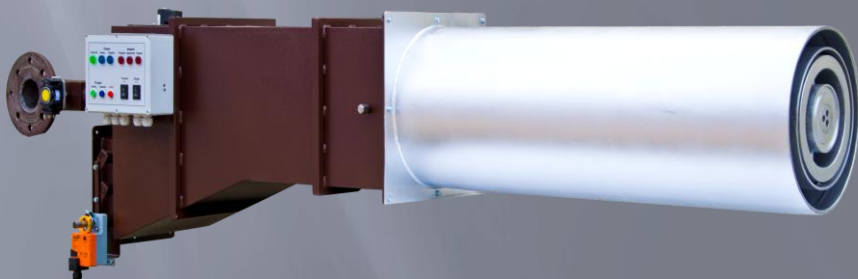

PeriFlame

Industrial Combustion Technologies and Solutions

BURNERS FOR ALL INDUSTRIES:

- Heating Boilers
- Steam Generators
- Technological furnaces
- Rotary Kilns
- Heat treatment furnaces
- Dryers
- Oil refinery
- Degassing mines
- Biogas plants
- Ground flare units

ADVANCED GAS TURBINE COMBUSTORS FOR ALL PURPOSES

- Periflame's Combustion Technology utilizes calculation methods based on recently discovered physical constants of combustion process and novel topological schemas.
- Microdiffusion combustion mechanism combines straight-flow flame-holders and a proprietary fuel-feeding system, which provides strictly ordered fuel-oxidizer mixing along with simultaneous reaction products separation, enabling Periflame's equipment to have granular manageability of flame configuration, temperature pattern and NO_x suppression.
